ABOUT ME

Recent Computer Science graduate with hands-on experience building agentic AI systems, RAG pipelines, and multi-agent workflows. I have worked with tools like LangGraph, LangChain, FastAPI, OpenAI API, and vector databases through personal projects, my Final Year Project, and a 3-month internship focused on autonomous agents and retrieval-augmented systems. I also work with Claude Code as part of my development workflow. Seeking an internship opportunity to contribute to AI-driven projects, strengthen my technical expertise, and gain hands-on industry experience within a collaborative engineering team.

EDUCATION

National College of Business Administration & Economics (NCBA&E) Lahore, Pakistan
Bachelor of Science in Computer Science (CGPA: 3.5 / 4.0) March 2022 – January 2026

EXPERIENCE

AI Engineer – Internship March 2026 – June 2026
Deep Cognitive Solutions Pakistan

- Contributed to the development of multi-agent systems using LangGraph, enabling autonomous task planning, tool orchestration, and multi-step workflow execution across enterprise use cases.
- Built end-to-end RAG pipelines integrating Pinecone vector databases, semantic search, and LLMs, achieving source-grounded responses with measurable accuracy improvements.
- Evaluated agent performance using RAGAS metrics (faithfulness, context precision, answer relevancy), iterating on prompts and retrieval strategies to improve output quality.
- Leveraged Claude Code CLI for AI-assisted development, accelerating prototyping cycles and streamlining experimentation across multiple agent architectures.

PROJECTS

Multi-Agent Customer Support System | *Python, LangGraph, FastAPI, OpenAI API, RAGAS*

- Architected an AI-powered multi-agent platform using LangGraph and FastAPI, with specialized agents for query classification, retrieval, response generation, and fallback handling.
- Implemented a RAG pipeline with Pinecone vector search to deliver accurate, source-grounded answers from knowledge bases. Designed to reduce manual support effort by automating responses to common queries.
- Evaluated system quality end-to-end using RAGAS benchmarks, continuously refining prompt strategies and retrieval configurations to maximize faithfulness and relevancy scores.

Appointment Scheduling Platform for Healthcare Professionals | *Python, FastAPI, PostgreSQL, ReactJS*

- Built a full-stack healthcare scheduling platform allowing patients to book appointments and doctors to manage availability through a responsive ReactJS web interface.
- Designed RESTful APIs with FastAPI and PostgreSQL supporting role-based access control, appointment workflows, and secure JWT authentication for patients, doctors, and admins.
- Built an admin dashboard enabling complete management of doctor schedules, appointments, and platform operations, reducing administrative overhead.

CERTIFICATIONS

Claude Code in Action

TECHNICAL SKILLS

Languages: Python, Typescript

Frameworks: LangChain, LangGraph, CrewAI, NextJS

Backend: FastAPI

AI/LLM Technologies: OpenAI API, Retrieval-Augmented Generation (RAG), Embeddings, Vector Databases (Pinecone, FAISS, Chroma), Agent Orchestration, Prompt Engineering

Databases: PostgreSQL

Developer Tools: Git, GitHub, Docker, Claude Code CLI, n8n
